Risk Assessment

Developed by Chris Kemp & Pascal Viot

Module Outline

This module provides the learner with the skills, knowledge and understanding required to enable them to undertake a risk assessment relative to their competency and position in the organisation. Although aimed primarily at the events industry this module can be applied equally across all industry sectors.

The module provides:

1. an understanding of the legal requirements for risk assessment
2. an introduction to the terminology of risk assessment
3. a comparison between differing methodologies for risk assessment
4. practical application and skills testing utilising the application of a scenario allowing students to trial their risk assessment skills in a learning and supportive environment thereby demonstrating their learnings from the course.

Learning Outcomes

On completion of this module the learner will be able to...

- demonstrate an understanding of the legal requirements for risk assessment.
- understand the terminology used in risk assessment.
- identify and utilise risk assessment methodologies relevant to their undertakings and environment.
- demonstrate the skill, knowledge and understanding required to complete a suitable and sufficient risk assessment.

Rather than advocating a single, prescriptive approach to risk assessment, this module uses a holistic approach and methodology for risk assessment and provides a number of examples of differing ways of documenting a risk assessment. This approach enables the learner to develop a broader understanding of risk assessment and supports them in making an informed decision about their preferred methodology.

Level of Study

The level of this programme is “Strategic” (level 5 UK). This is evidenced by the demands of the learning process, the theoretical and practical demands placed on participants, the application back into the workplace and the level of those attending the programme.

Skills and Other Attributes

On completion of this module the learner will have developed the skills required to select, from a position of informed knowledge and understanding, the most appropriate approach and methodology for completion and recording of a risk assessment.

Assessment

The learner will be required to submit a completed risk assessment prepared against the supplied scenario. The assessment will cover those areas and phases of the event they worked on in their groups during the workshop.

The trainer will monitor the learner's level of engagement and interactions during the workshop and review the submitted risk assessment to ensure that the learner can demonstrate the required level of competency.

Knowledge and Understanding

On completion of this module the learner will have an understanding of;

- the legal requirements for risk assessment
- the terminology used in risk assessment
- the differing approaches and methodologies used when completing a risk assessment
- learning from the past and other industries
